

RebelInuX White Paper

Version 2.2

RebelInuX (REBL)

Clément Landormy, Founder of RebelInuX

September 15, 2026

AI-Animated Historical Journey Collectibles Powered by a Pack of Digital Rebels!

Introduction

RebelInuX brings history to life through AI-animated video digital collectibles. We transform paintings, statues, and heritage sites into living stories. **This is cultural preservation powered by blockchain.**

Our mascot travels through time. We started with the French Revolution. **The community decides what comes next.**

Holders of our dual-asset baseline system earn age-weighted \$REBL rewards. **No staking. No locking. Just hold art that matters.** Transaction fees from our ZORA page fund a governance-controlled buy-back and burn pool for \$REBL. **The more people trade, the scarcer \$REBL becomes.**

*Inspired by the fearless Shiba Inu, RebelInuX is where history, art, and rebellion meet.
Hold the assets. Preserve history. Earn \$REBL.*

Executive Summary

RebelInuX: Where history, digital art, and rebellion meet on the blockchain.

As the SocialFi market reaches \$17.1 billion and digital collectibles gain mainstream adoption, RebelInuX bridges cultural preservation with sustainable token economics.

RebelInuX transforms historical art into AI-animated Rebel Journey Collectibles while pioneering a sustainable SocialFi ecosystem that bridges digital ownership on Base (ZORA) with high-performance token economics on Solana. This innovative framework establishes five core pillars:

- **AI-Animated Historical Art:** Rebel Journey Collectibles bring museum paintings to life, preserving cultural heritage through cutting-edge AI technology
- **Digital Ownership:** The 2-asset baseline (\$rebelinux + Rebel Key) serves as the core claim ticket for cross-chain \$REBL rewards, with Journey Collectibles as optional boosters.
- **Secure Distribution:** Rebel Key enables one-time Solana address registration for all future epoch rewards
- **Value Accrual:** \$REBL tokens benefit from deflationary mechanics powered by ZORA trading revenue, with all deployments (50% buy-back and burn, 20% AI production, 15% reserve, 15% operations) triggered by REBL Governance Hub vote
- **Community Governance:** The REBL Governance Hub (token-gated Telegram via Collab.land, 500K \$REBL threshold, 1 member = 1 vote) enables efficient, low-friction decision-making including the Journey Contest where community decides next historical destinations
- **Proportional anti-dump:** Fair penalties for partial sales, protecting diamond hands

The ecosystem creates a self-reinforcing economic flywheel. ZORA asset trading generates ETH revenue. That revenue strategically accelerates \$REBL value through governance-triggered buy-back and burn mechanisms. Immutable smart contracts with renounced authorities guarantee long-term security and protocol alignment.

1 Market Overview

1.1 The SocialFi Opportunity

SocialFi (Social Finance) combines decentralized finance (DeFi) principles with social media, giving users and content creators direct control over their data, content, and earnings (Market Research Future, 2026). The SocialFi market reached approximately **\$17.1 billion in 2026**, growing from \$14.78 billion in 2025 (Market Research Future, 2026). This growth is driven by rising crypto adoption, now exceeding 400 million users globally, combined with increasing creator economy participation and dissatisfaction with centralized platform monetization.

The SocialFi sector grew significantly between 2022 and 2025, with daily active wallets on SocialFi platforms increasing by over **500%** in that period (DappRadar, 2026). By early 2026, the combined market capitalization of SocialFi-related tokens had reached approximately **\$1.5 billion** (DeFi Llama, 2026). Key features driving this growth include:

- **Tokenized social capital:** Users can monetize their influence and engagement
- **Decentralized Autonomous Organizations (DAOs):** Community governance over platform decisions
- **Digital ownership through NFTs and content coins:** Users truly own their content and assets
- **Direct value distribution:** Rewards flow directly to creators and participants

1.2 The Digital Collectibles Market

The global NFT market grew from **\$60.82 billion in 2025 to \$86.23 billion in 2026**, representing a compound annual growth rate of **41.8%** (Fortune Business Insights, 2026). By 2030, the market is projected to reach **\$347.46 billion** (Grand View Research, 2026b). Digital collectibles are the largest segment within this market, with the digital collectibles market itself valued at **\$39.1 billion in 2026** and projected to reach **\$392.6 billion by 2034** (Grand View Research, 2026a).

NFT trading volume in 2022 reached **\$24 billion**, demonstrating the scale of economic activity in this space (DappRadar, 2022). Importantly, the market is maturing beyond speculation toward utility-driven assets that provide real value to holders (CoinDesk Research, 2026).

1.3 The Shift Toward Utility-Driven Assets

The NFT market is evolving from pure speculation toward utility-driven assets. According to industry analysis, utility-driven NFTs, assets that provide real benefits like loyalty rewards, community access, and governance rights, are leading the next wave of adoption (CoinDesk Research, 2026). RebelInuX aligns with this trend by offering:

- **Utility through rewards:** \$REBL earnings for holding Rebel Journey Collectibles and \$rebelinux creator coin
- **Utility through governance:** Community voting on Journey Contest themes and treasury proposals
- **Utility through community:** Token-gated access via the REBL Governance Hub and collector leaderboards

1.4 Digital Art as a Growing Asset Class

Digital art is now the third-largest spending category among high-net-worth collectors (Art Basel and UBS, 2025). In 2025, **51%** of surveyed high-net-worth individuals purchased digital art, a significant increase from previous years (Art Basel and UBS, 2025). This shift is driven by younger collectors: Millennials' share of digital art purchases nearly doubled from 12.6% in 2018 to 23.8% in 2025 (Art Basel and UBS, 2025). The digital art market itself is valued at approximately **\$5.5-\$6.2 billion**, representing a significant and growing opportunity (Statista, 2026).

1.5 Positioning RebelInuX

RebelInuX sits at the intersection of three growing markets:

- **SocialFi:** A \$17.1B market with 500% growth in active wallets (Market Research Future, 2026)
- **Digital Collectibles:** An \$86B market growing at 41.8% CAGR (Fortune Business Insights, 2026)
- **Digital Art:** A \$6B+ market driven by younger collectors (Statista, 2026)

By combining AI-animated historical art with community governance and token rewards, RebelInuX is uniquely positioned to capture value across all three segments. The project's focus on cultural preservation and education through blockchain technology creates a compelling value proposition that differentiates it from purely speculative NFT projects.

1.6 Our Competitive Advantage

Unlike traditional NFT projects that rely on speculation, RebelInuX offers:

- **Sustainable rewards:** Fixed reward pool ($ERP \times \gamma$) with no inflation
- **Community governance:** 1 member = 1 vote, not whale-dominated
- **Cultural preservation:** AI-animated historical art with real educational value
- **Cross-chain utility:** Base (ZORA) for collectibles, Solana for tokenomics
- **Content Coins over NFTs:** Superior liquidity and creator economics
- **Zero staking:** No locking required, assets stay in your wallet

Quick Start: Join the Rebellion in 6 Steps

1. **Collect:** Purchase \$rebelinux Creator Coin and the Rebel Key on [ZORA](#)
2. **Register Once:** Post your Solana address on the Rebel Key ZORA page
3. **Hold:** Keep your assets in your wallet, no locking or staking required.
4. **Earn:** \$REBL rewards sent automatically to your Solana wallet each epoch
5. **Vote:** Join the REBL Governance Hub with 500K \$REBL to decide the next Journey theme and trigger buy-backs
6. **Climb:** Become the largest holder of collectibles for bonus multipliers

2 RebelInuX: AI-Animated Journey Collectibles & SocialFi Architecture

Our Mission: Transform historical art into AI-animated video digital collectibles. Our mascot travels through time, witnessing pivotal moments in human history. Each Journey is a collection of AI-animated digital collectibles that preserve cultural heritage.

What is SocialFi? SocialFi (Social Finance) rewards you for holding culturally significant digital collectibles with artistic and historical value. You own real assets, not just digital entries in a pool. In RebelInuX, you hold AI-animated Rebel Journey Collectibles and earn rewards. You don't stake tokens.

2.1 User Journey at a Glance

A RebelInuX collector holds the 2-asset baseline (\$rebelinux + Rebel Key) in their wallet, optionally supplemented by Rebel Journey Collectibles for boost multipliers. Each week, they automatically receive \$REBL rewards proportional to their age-weighted holdings and collector bonuses. They can vote on historical themes, compete on leaderboards, and climb the collector ranks, all without staking or locking their assets.

2.2 How RebelInuX Differs from Traditional NFTfi

Unlike traditional NFTfi protocols that require locking or staking, RebelInuX allows you to:

- **Keep custody:** Assets stay in your wallet, never locked
- **Earn automatically:** Age-weighted rewards without staking
- **Preserve utility:** Rebel Journey Collectibles remain accessible
- **Support culture:** Your holdings fund AI-animated historical art

The key differences are summarized in Table 2.2 below.

Table 1: Comparison of Traditional NFTfi vs. RebelInuX SocialFi

Feature	Traditional NFTfi	RebelInuX SocialFi
Asset custody	Locked in contract	In your wallet
Staking required	Yes	No
Reward mechanism	Stake duration	Age-weighted holding
Anti-dump penalty	Hard lock / complete reset	Epoch-end FIFO proportional depletion
Asset utility	Suspended	Active

Why SocialFi as Our Funding Model? Traditional staking locks your tokens and creates no lasting value. RebelInuX is different. You simply hold AI-animated Rebel Journey Collectibles that preserve historical art. In return, you earn \$REBL rewards. You own real art with cultural worth, not just entries in a liquidity pool. SocialFi makes this sustainable.

2.3 Multi-Chain Architecture

The RebelInuX ecosystem leverages multiple blockchains optimally. Base blockchain (via ZORA) handles AI-animated Journey Collectible content and community (Base Docs, 2026). Solana manages the token economy and value accrual (Solana Docs, 2026). This cross-chain design ensures seamless interaction, directly rewards creators, and drives value back to the entire ecosystem.

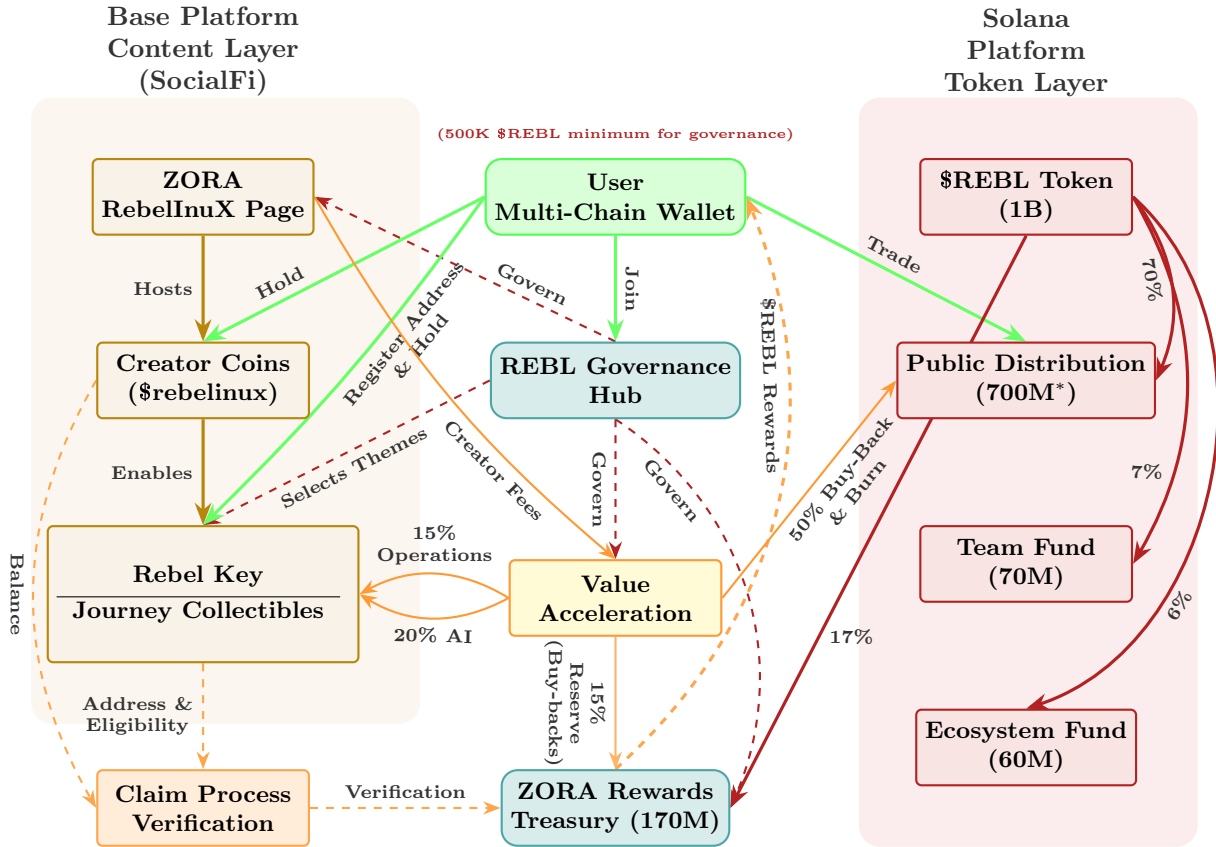

Figure 1: RebelInuX multi-chain architecture showing the Base content layer (Creator Coin + Digital Collectible Bundle), Solana token layer, and core value flows. All Value Acceleration deployments are triggered by REBL Governance Hub vote.

* The 700M public distribution was initially allocated through the pump.fun bonding curve. Following graduation, these tokens are now tradeable via the PumpSwap liquidity pool.

Legend of Diagram Symbols and Colors

- Tan Boxes and Arrows:** Base Assets (ZORA): Creator Coin + Rebel Key + Journey Collectibles (optional boosters)
- Red Boxes and Arrows:** Solana blockchain assets and token distributions
- Dashed Red Arrows:** Governance by REBL holders (500K minimum)
- Green Boxes and Arrows:** User interactions and wallets
- Teal Boxes:** ZORA Rewards Treasury Wallet
- Orange Boxes and Solid Arrows:** Value Acceleration: Creator fees split into governance-controlled pools (50% Buy-Back & Burn, 20% AI Production, 15% Reserve for buy-backs and community initiatives, 15% Operations); all deployments triggered by REBL Governance Hub vote
- Orange Dashed Arrows:** Claim process and reward distribution

2.4 Long-Term Vision

RebelInuX aims to operate with transparency and legal compliance, with plans to eventually register as a formal entity. Our path is progressive decentralization. Over time, governance powers (treasury allocation,

protocol parameters) will transfer to the REBL Governance Hub. The ZORA Rewards Treasury will progressively move under community governance. We don't promise "complete" decentralization, just meaningful, verifiable transfer of governance to our community.

3 The Triple-Asset SocialFi Ecosystem

3.1 Overview and Utility

The RebelInuX SocialFi ecosystem is powered by a novel asset model on **ZORA (Base chain)**, designed to merge community engagement with secure, verifiable value distribution. As illustrated in Figure 1 (the **Architecture Overview**), this system operates across chains and consists of three interconnected asset types: a 2-asset baseline for base rewards eligibility, plus optional yield boosters. These work together to distribute the **RebelInuX (\$REBL)** token on Solana:

- **The Creator Coin (\$rebelinux): Your Digital Claim Ticket** (See Figure 2). This is the core value-bearing asset, traded as \$rebelinux on ZORA. Each Creator Coin grants you age-weighted allocation of \$REBL tokens from the Solana community pool, distributed during designated epoch claim periods. Its ownership is the primary data point verified by the system.

Figure 2: The \$rebelinux Creator Coin - Your digital claim ticket for \$REBL rewards. Explore on [ZORA](#)

- **Content Coins: Rebel Key + Rebel Journey Collectibles** (See Figures 3 and 4). These are your eligibility passes for epoch rewards. The Rebel Key is required, while Journey Collectibles are optional yield boosters. The Content Coins consist of two interconnected assets:
 - **The Rebel Key:** A single, permanent digital collectible that serves as the exclusive claiming interface for all future epochs. Unlike the previous rotating key system, this key never changes. You register your Solana address **once** on its ZORA page, and that address is used for all future reward distributions.

Figure 3: The Rebel Key – Your single, unchanging claiming interface for all epoch rewards. Register your Solana address here once. View on [ZORA](#)

- **Rebel Journey Collectibles:** AI-generated videos created by the project, retracing important historical events of a country at a specific point in time (e.g., RebelInuX at the Storming of the Bastille, 1789). Each Journey is a **collection** containing multiple video digital collectibles. Rebel

Journey Collectibles are optional yield boosters, not eligibility requirements. Each collectible multiplies your age-weighted \$rebelinux share by +0.05x, and holding the largest balance of any given collectible adds a competitive +0.10x bonus. As our mascot travels through history, new collectibles are released to build each Journey collection. Older collectibles remain valuable through the equal bonus system and largest holder bonuses.

The inaugural **French Revolution Journey** chronicles the twilight of the Ancien Régime and the Revolution that followed. The collection currently spans five chapters across seven collectibles:

- * **REBL-J1A: "Twilight of the Ancien Régime"** (1779) — *Chapter I, full-video*
- * **REBL-J1B: "Winter of Discontent"** (1780–1788) — *Chapter II, full-video*
- * **REBL-J1C: "The Oath"** (April–June 1789) — *Chapter III, full-video*
- * **REBL-J1D: "The Fall"** (July 14, 1789) — *Chapter IV, full-video*
- * **REBL-J1E: "Liberty"** (July–October 1789) — *Chapter V, full-video*
 - **REBL-J1E-01: "Abolition of Privileges"** (August 1789)
 - **REBL-J1E-02: "The Women's March"** (October 1789)
 - **REBL-J1E-03: "Chaos at Versailles"** (October 1789)
 - *[additional scenes released as Chapter V unfolds]*

Figure 4: The inaugural Rebel Journey Collection — The French Revolution Journey. The collection currently features **REBL-J1A: "Twilight of the Ancien Régime"** (1779), **REBL-J1B: "Winter of Discontent"** (1780–1788), **REBL-J1C: "The Oath"** (April–June 1789), **REBL-J1D: "The Fall"** (July 14, 1789), and the first scenes from **Chapter V: "Liberty"** — **REBL-J1E-01: "Abolition of Privileges"** (August 1789), **REBL-J1E-02: "The Women's March"** (October 1789), and **REBL-J1E-03: "Chaos at Versailles"** (October 1789). Additional scenes are released as the Journey unfolds. Mint on [ZORA](#).

Collection format. Chapters I through IV were released as full-video collectibles, capturing the complete narrative arc of each historical moment. Beginning with Chapter V, each scene is minted as a standalone collectible, allowing collectors to own individual historical moments and multiply their yield-boost bonuses at the scene level. All collectibles count equally toward the Equal Bonus and Largest Holder bonuses.

- **The \$REBL Token: Your Cross-Chain Reward.** (See Figures 5a and 5b) This is the reward token distributed on Solana to holders of the 2-asset baseline (Creator Coin + Rebel Key), with additional boosts for Rebel Journey Collectible holders, during epoch claim periods. Its value is directly accelerated by the ecosystem's activity through the **Value Acceleration Mechanism** (50% of ZORA revenue buys back and burns \$REBL).

3.2 Why Content Coins Over NFTs?

RebelInuX’s digital collectibles, the Rebel Key and Rebel Journey Collectibles, are deployed as **Content Coins** on the ZORA protocol (ZORA Docs, 2026c). This is a deliberate architectural choice that offers several advantages over traditional NFTs for our ecosystem.

Liquidity and Accessibility

Unlike traditional NFTs, which are non-fungible and often illiquid, Content Coins are **fungible ERC-20 tokens** with a fixed supply of 1 billion per coin (ZORA Docs, 2026b). This means they can be traded instantly on automated market makers like Uniswap, creating continuous liquidity. Traditional NFTs often suffer from a lack of buyers at fair prices; Content Coins solve this by making every asset instantly tradeable (Horne, 2025).

Creator Economics and Continuous Rewards

Content Coins are designed to create a sustainable creator economy. For every trade, a **1% trading fee** is collected and distributed. The creator receives **50% of these fees**, earning a recurring, on-chain revenue stream as long as their content is traded (ZORA Docs, 2026d). This is a significant upgrade from NFTs, where creators typically only earn on the primary sale and secondary royalties, which are often optional or capped (Horne, 2025).

Fractionalized Participation

As described by ZORA co-founder Jacob Horne, Content Coins can be viewed as a **form of NFT fractionalization** (Horne, 2025). Instead of one person owning a unique 1/1 NFT, a piece of content is divided into smaller, tradable units. This allows **more people to own a share** of cultural moments and historical art, making participation more accessible and aligning with our mission of cultural preservation.

Alignment with ZORA’s Ecosystem

By building with Content Coins, RebelInuX natively integrates with ZORA’s infrastructure, including:

- Automatic liquidity provisioning through Uniswap V4 pools (ZORA Docs, 2026a)
- A sniper tax mechanism to prevent front-running at launch (ZORA Docs, 2026b)
- Support for creator coins, content coins, and trend coins within a unified protocol (ZORA Docs, 2025b)
- The ability to pair Content Coins against Creator Coins, creating a content-to-creator-to-platform liquidity flywheel (ZORA Docs, 2025a)

Trade-Offs

While Content Coins offer superior liquidity and accessibility, they trade off the uniqueness of traditional 1/1 NFTs. For RebelInuX’s mission of cultural preservation and community ownership, we believe this trade-off is worthwhile.

Conclusion

Content Coins offer the **liquidity, accessibility, and continuous creator earnings** that NFTs cannot easily provide, all while maintaining the ability to represent unique cultural assets. For RebelInuX, this

means our Rebel Journey Collectibles are not just collectibles; they are **liquid, tradeable assets** that continuously reward holders and creators alike.

3.3 Collector Bonuses

RebelInuX rewards dedicated collectors through a simple, transparent bonus system that multiplies your age-weighted share of \$rebelinux.

Equal Bonus (All Holders)

Every Rebel Journey Collectible you hold gives you a bonus of **+0.05x** on your age-weighted \$rebelinux share. There are no tiers, no rank requirements, and no complex calculations. Every collectible is valued equally. Exceptional collectibles may carry a higher bonus, announced at launch on ZORA.

Largest Holder Bonus (Competitive)

For each Rebel Journey Collectible, the wallet holding the largest balance receives an additional bonus of **+0.1x** on their age-weighted share.

This creates a competitive element where dedicated collectors are rewarded for holding significant positions in individual collectibles.

Total Multiplier Calculation

$$\text{Multiplier}_i = 1.0x + (0.05 \times \text{Collectibles}_i) + (0.1 \times \text{LargestHolder}_i) \quad (1)$$

where:

- Collectibles_i = Number of unique Rebel Journey Collectibles held by participant i
- LargestHolder_i = Number of collectibles where participant i is the largest holder

Example Scenarios

Casual Collector: - Holds 1 collectible (not largest holder) - **Multiplier:** $1.0x + (0.05 \times 1) + 0 = \mathbf{1.05x}$

Dedicated Collector: - Holds 5 collectibles (not largest holder on any) - **Multiplier:** $1.0x + (0.05 \times 5) + 0 = \mathbf{1.25x}$

Whale Collector: - Holds 10 collectibles (largest holder on 3 of them) - **Multiplier:** $1.0x + (0.05 \times 10) + (0.1 \times 3) = \mathbf{1.80x}$

Legacy Value

Holding collectibles from past Journey collections also counts toward your Equal Bonus. This rewards early supporters and ensures old collections retain value.

Sustainability & Scalability

This system is designed to be sustainable at any scale:

- **Zero Cost:** All rewards come from the existing Weekly Epoch Reward Pool (WERP)
- **Scalable:** Works with 1 or 100 collectibles
- **Competitive:** Largest holders earn significantly more
- **Retention:** Everyone wants to collect more and become the largest holder
- **Loyalty:** All collectibles count, regardless of age

3.4 How to Claim \$REBL Tokens

The RebelInuX ecosystem operates on a predictable, **epoch-based cycle** designed for transparency, fairness, and consistent community engagement. This SocialFi model replaces continuous staking with defined claiming periods, creating a regular rhythm for rewards distribution.

Epoch Definition & Schedule

An Epoch is a fixed, seven-day reward cycle with the following schedule:

- **First Epoch of New Era:** A1 (started May 3, 2026)
- **Duration:** 7 days (weekly)
- **Naming Convention:** A1, A2, A3... A9, then B1, B2, B3... B9, then C1, C2, etc. Each letter represents a new chapter (9 epochs per chapter).
- **Reset Time:** Every Sunday at 21:00 UTC
- **Process:** The conclusion of one epoch and the commencement of the next occur simultaneously at the reset time.
- **Distribution Guarantee:** \$REBL tokens distributed within 48 hours of epoch closure
- **Age Bonus:** +7% per epoch (max 20 epochs), based on the \$REBL received by each token batch. With 20 epochs, the batch reaches +140% weight.
- **Weekly Reward Range:** 1.28M - 3.2M \$REBL (40% minimum floor - 100% maximum), scaled by the Gamma factor (see [Reward Calculation & Transparency](#) below for the formula).

This consistent schedule allows holders to know precisely when to act and when to expect rewards.

Unified Participation System (Active from Epoch A1)

Starting with Epoch A1, the claiming process has been significantly simplified. The "A" denotes the new era of permanent keys and one-time registration, marking a clean break from the previous rotating system.

System Logic:

- A single, permanent Rebel Key serves as the exclusive claiming interface for all future epochs.
- No more key rotation or weekly address posting.
- One-time Solana address registration on the Rebel Key ZORA page.
- Participation requires holding the 2-asset baseline (\$rebelinux + Rebel Key). Journey Collectibles are optional yield boosters.

Epoch Announcements

Epoch transitions are announced on the ZORA Rebel Key comment section. A typical announcement follows this format:

● EPOCH A2 CLOSED. ● EPOCH A3 LIVE.
Already submitted? No need to resubmit. Never submitted? Add your address now for this epoch and all future ones.
Requirements: Rebel Key + \$rebelinux. Distributions within 48h (Journey Collectibles optional for boosts).

Participation Requirements

- **\$rebelinux Balance:** Minimum 0.05% of circulating supply (249,621 \$rebelinux as of October 2, 2025) at epoch snapshot.
- **Rebel Key:** You must hold the official, permanent Rebel Key.
- **Rebel Journey Collectibles: Optional.** Not required for base epoch eligibility. Provides +0.05x equal bonus each and +0.10x largest holder bonus.

Note: Minimum requirements and pricing are subject to change based on market conditions and ecosystem evolution. Verify current requirements on ZORA at time of participation.

Claim Process Steps

1. Acquire the 2-Asset Baseline:

- **Purchase a Creator Coin (\$rebelinux):** This is your claim ticket. Ownership grants you age-weighted allocation of \$REBL tokens.
- **Own the Rebel Key:** This single key is the official claiming interface for all epochs.
- *Optional:* Collect Rebel Journey Collectibles to boost your multiplier.

All assets are available in our collection (see Figure 6): <https://zora.co/@rebelinux>

Figure 6: RebelInuX digital collectible collection. View on [Zora](#)

2. Register Your Solana Address Once:

- Navigate to the ZORA page for the **Rebel Key**.
 - **Submit Your Solana Public Address:** Post it in the comments **once**. This address will be recorded and used for all future reward distributions.
 - You only need to repeat this process if you wish to **change your recipient wallet address**.
3. **Participate in Active Epochs:** Token distributions occur during designated epoch periods. You only need to hold the required assets at the time of the **epoch snapshot**. No further action is required each week.
 4. **Receive Your \$REBL Tokens on Solana:** Our system automatically verifies your holdings and sends your allocated \$REBL tokens directly to your pre-registered Solana wallet address each epoch.

Note: Supply metrics undergo periodic revision to reflect vesting progression and market activity.

SECURITY WARNING

ONLY share your public address (e.g., ahWDSP4...3MUiI).
NEVER share your private key, seed phrase, or sign a malicious transaction.

Reward Calculation & Transparency

The allocation of \$REBL tokens to each participant is determined by their **Weighted Share (WS)** of the circulating \$rebelinux supply. Your Collector Multiplier (see Section 3.3) is applied directly to your age-weighted share, and rewards are distributed proportionally to the total pool of weighted shares. This system rewards long-term holders with enhanced distribution weight by valuing each token based on its individual holding period and rewarding dedicated collectors.

$$\text{Reward}_i = \left(\frac{\text{WS}_i}{\sum_{j=1}^n \text{WS}_j} \right) \times \text{ERP} \times \gamma \quad (2)$$

where for each epoch: WS_i denotes the Weighted Share of participant i , $\sum \text{WS}_j$ is the total weighted shares across all participants, ERP is the Epoch Reward Pool, and γ is the Gamma Scale Factor.

Weighted Share Calculation:

$$\text{WS}_i = \sum_{k=1}^m (B_{i,k} \times (1 + 0.07 \times \min(A_{i,k}, 20)) \times \text{Multiplier}_i) \quad (3)$$

where:

- $B_{i,k}$ = Size of token batch k held by participant i
- $A_{i,k}$ = Age of token batch k (in epochs)
- m = Number of distinct token batches held by participant i
- Multiplier_i = Collector Multiplier from Section 3.3

Gamma Scale Factor (γ):

$$\gamma = \text{MAX} \left(0.4, \text{MIN} \left(1, \frac{P}{0.5 \times \text{CS}}, \frac{\text{CS} \times 1.5}{\sum \text{WS}} \right) \right) \quad (4)$$

where P is the total participating tokens and $\sum \text{WS}$ is the total weighted shares.

Gamma Factor Influences:

- **Positively influenced:** When more participants hold \$rebelinux, the Gamma factor increases toward 1.0, raising the effective reward pool.
- **Negatively influenced:** The Gamma factor decreases when weighted shares grow too large or participation falls below 50% of supply. More participants sharing the same pool also dilutes individual rewards.

Circulating Supply Definition:

$$CS = S_{\text{total}} - S_{\text{locked}} - S_{\text{founder}} = 499,242,047 \quad (5)$$

where:

- $S_{\text{total}} = 1,000,000,000$ \$rebelinux (total token supply)
- $S_{\text{locked}} = 489,448,313$ \$rebelinux (48.94% locked in ZORA protocol contracts)
- $S_{\text{founder}} = 11,309,640$ \$rebelinux (tokens held by founder)

Epoch Reward Pool (ERP):

$$ERP = 3,200,000 \text{ \$REBL (Weekly fixed pool)} \quad (6)$$

Numerical Example

Refer to the formulas in Section 3.4 for the underlying calculations.

1. System Parameters:

- **CS** = 499,242,047 \$rebelinux (circulating supply)
- **WERP** = 3,200,000 \$REBL (weekly fixed pool)
- **Age bonus**: +7% per epoch

2. Other Participants (Estimated):

- Total other tokens: 100,000,000 \$rebelinux
- Average age: 5 epochs
- Age factor: $1 + 0.07 \times 5 = 1.35$
- Other WS = $100,000,000 \times 1.35 \times 1.0 = 135,000,000$

3. Participant A (Your Portfolio):

- Total \$rebelinux Holdings: 7,500,000
- Token Batches:
 - Batch 1: 5,000,000 tokens held for 8 epochs $\rightarrow$ Age factor = $1 + 0.07 \times 8 = 1.56$
 - Batch 2: 2,500,000 tokens held for 1 epoch $\rightarrow$ Age factor = $1 + 0.07 \times 1 = 1.07$
- **Base WS (before multiplier)**: $(5,000,000 \times 1.56) + (2,500,000 \times 1.07) = 7,800,000 + 2,675,000 = 10,475,000$
- **Multiplier**: 1.35x (see breakdown below)
- **WS (after multiplier)**: $10,475,000 \times 1.35 = 14,141,250$
- **Multiplier Breakdown**:
 - Base: 1.0x
 - Equal Bonus: 5 collectibles $\times 0.05x = +0.25x$
 - Largest Holder Bonus: 1 collectible $\times 0.1x = +0.1x$
 - **Total Multiplier**: $1.0x + 0.25x + 0.1x = \mathbf{1.35x}$

4. Total Participation:

- **Total WS**: $135,000,000 + 14,141,250 = 149,141,250$
- **Your Share of WS**: $\frac{14,141,250}{149,141,250} = 9.48\%$

5. Gamma Scale Factor (γ) Calculation:

$$\begin{aligned} \text{Term 1} &= \frac{P}{0.5 \times \text{CS}} = \frac{107,500,000}{249,621,023} = 0.43 \\ \text{Term 2} &= \frac{\text{CS} \times 1.5}{\sum \text{WS}} = \frac{748,863,070}{145,475,000} = 5.15 \\ \gamma &= \text{MAX}(0.4, \text{MIN}(1, 0.43, 5.15)) = 0.43 \end{aligned} \tag{7}$$

6. Your Reward Calculation:

- **Your Share of WS**: $\frac{14,141,250}{149,141,250} = 9.48\%$
- **Your Final Reward**: $0.0948 \times 3,200,000 \times 0.43 = 130,457$ \$REBL

7. What This Means:

- Participation is at **21.5% of circulating supply** (107.5M / 499.2M)
- Because participation is below 50%, γ is below 1.0 (the 40% minimum floor protects the treasury).
- Your Collector Multiplier (1.35x) increased your WS from 10,475,000 to 14,141,250.
- If participation reaches 50%+ of CS, γ would increase toward 1.0.

8. Key Insights:

- **Batch-Based Fairness:** Each token batch is valued independently based on its actual age
- **Loyalty Gradient:** Each batch gains +7% weight per epoch
- **Gamma Protection:** Treasury protected with 40% minimum floor during low participation
- **Participation Matters:** γ increases when more of the circulating supply participates
- **Accumulation-Friendly:** Add to positions without penalizing existing token age
- **Collector Rewards:** Every collectible gives +0.05x; largest holders get an extra +0.1x on their age-weighted share
- **Sustainability:** Total rewards always equal $ERP \times \gamma$, regardless of multiplier size

*This batch-based methodology ensures the most equitable distribution while the Gamma Scale Factor protects the treasury. All epochs are publicly verifiable through official **EPOCH OPEN** and **EPOCH CLOSED** designations.*

3.5 Treasury Sustainability

The ZORA Rewards Treasury (170M \$REBL) is designed to sustain weekly rewards for over 2 years: 40% (68M) released immediately as a cliff, 60% (102M) vesting linearly over 2 years. Beyond this horizon, the 15% fee Reserve and ongoing ecosystem revenue provide additional funding sources for rewards and community initiatives, subject to REBL Governance Hub vote.

3.6 Benefits of Holding the 2-Asset Baseline

- **Age-Weighted \$REBL Rewards:** Ownership of **\$rebelinux tokens** grants you eligibility for weekly \$REBL distributions (1.28M - 3.2M \$REBL weekly, scaled by Gamma), with rewards calculated based on your weighted share of the circulating supply.
- **Simplified Claiming Process:** One-time Solana address registration via the Rebel Key. No need to post your address every epoch.
- **Rebel Journey Collectibles (Optional):** Hold any Rebel Journey Collectible to boost your multiplier. Each collectible gives +0.05x, and holding the largest balance of any collectible gives +0.10x. All collectibles count toward your bonus, including legacy editions from past Journeys.
- **Cultural Preservation:** Your holdings directly support the preservation of historical art through AI animation.
- **Loyalty Amplification:** Your \$rebelinux tokens gain +7% weight per epoch.
- **Collector Bonuses:** Every collectible gives +0.05x. Largest holders of each collectible get an extra +0.1x.
- **Immediate Access:** Claim and receive your \$REBL tokens instantly during each active claim period, with no locking or vesting required for distributed rewards.
- **Governance Rights:** Holders with 500,000+ \$REBL can join the REBL Governance Hub to vote on key decisions (1 member = 1 vote), including Journey Contest winners.

- **Exclusive Access:** Get priority access to future distributions, community events, and partner collaborations, solidifying your status as a core rebel.
- **Governance-Controlled Value Acceleration:** Creator fees are allocated across four governance-controlled pools: 50% for \$REBL buy-backs and burns, 20% for AI video production, 15% for the Reserve, and 15% for operations. All deployments are triggered by REBL Governance Hub vote, allowing the community to time buy-backs strategically.

3.7 Free Market Dynamics & Incentives

The RebelInuX ecosystem is designed around free market principles and powerful incentives rather than artificial restrictions.

- **No Artificial Lock-ups:** There is no protocol-level mechanism that prevents a holder from selling their \$rebelinux tokens after claiming \$REBL rewards. This ensures immediate liquidity and true ownership for all participants.
- **Dual Value Accrual:** Holders benefit from two value streams:
 - **Age-Weighted Rewards:** Earn \$REBL tokens based on your age-weighted \$rebelinux holdings during weekly distributions
 - **Value Appreciation:** All \$REBL tokens may appreciate in value through buy-backs and burns triggered by REBL Governance Hub vote, using revenue allocated to the Buy-Back Pool and Strategic Reserve.
- **Speculation & Utility:** The market price of \$rebelinux tokens will reflect both the value of potential future \$REBL rewards and the speculative value of its utilities, such as:
 - Governance power in the REBL Governance Hub
 - Exclusive access to community events and drops
 - Status as a cultural curator in the ecosystem

This model creates a transparent and efficient market where the value of \$rebelinux tokens is directly tied to the success and activity of the entire RebelInuX ecosystem.

3.8 Anti-Dump Protection & Epoch-End FIFO Protocol

3.8.1 Epoch-End Balance Snapshot

To prevent system glitches and ensure deterministic tracking, all wallet balance changes, age growth increments, and transfer deductions are calculated strictly during the **epoch-end snapshot (Sundays at 21:00 UTC)**. No mid-week intra-block penalty glitches occur. Holders can calculate their expected minimum epoch rewards without worrying about real-time trade interference.

3.8.2 First-In, First-Out (FIFO) Age Depletion Protocol

When a partial balance reduction occurs, age subtraction follows a **First-In, First-Out (FIFO)** sequence based on tranche age seniority:

1. **Newest Tokens Depleted First:** Penalty reductions are applied starting from the lowest-aged token batches acquired most recently.
2. **Core Holdings Preserved:** Accumulated age bonuses on a holder's oldest, original token tranches remain completely untouched unless the entire balance of newer tokens is exhausted.
3. **Epoch-End Valuation:** This calculation is processed strictly during the epoch-end snapshot, using the wallet's starting balance versus ending balance for each epoch.

Example: A holder owns 1,000 \$rebelinux at max age bonus and recently added 200 new \$rebelinux. Selling 200 \$rebelinux only wipes out the zero-age bonus of the newest tokens. The original 1,000 tokens keep 100% of their accumulated diamond-hand bonus.

4 Tokenomics

The RebelInuX tokenomics are designed for a fair launch on Pump.fun, followed by sustainable growth across both Solana and Base blockchains. The project will bootstrap fairly, then activate its full SocialFi ecosystem with a fixed supply of 1 billion (1,000,000,000) tokens.

4.1 Fair Launch Mechanism

The RebelInuX token (\$REBL) was launched on pump.fun to ensure a transparent and equitable initial distribution, leveraging the platform's core features: one-click creation, a bonding curve, and automatic graduation (Pump.fun Docs, 2025).

- **Total Supply:** 1,000,000,000 \$REBL (1 Billion) with 6 decimals.
- **Initial Distribution:** 100% of the supply was minted into the pump.fun bonding curve. The creator received **zero tokens** at launch, adhering to a true fair launch.
- **PumpSwap Pool Creation:** Upon graduation, the pump.fun contract automatically creates the initial Liquidity Pool (LP) on PumpSwap.
- **LP Locking:** The LP tokens representing this initial liquidity are created. **90% of these LP tokens will be locked for 1 year** to ensure project longevity and commitment.
- **Founder Token Acquisition:** The founder purchased tokens on the open bonding curve like any other participant. These personally acquired tokens are the source of all allocations for the Team Fund, Ecosystem Fund, and ZORA Rewards Treasury outlined below.

4.2 Final Token Allocation

The successful conclusion of the bonding curve sale triggers the activation of the full RebelInuX ecosystem. The definitive distribution of the total 1 billion token supply is as follows:

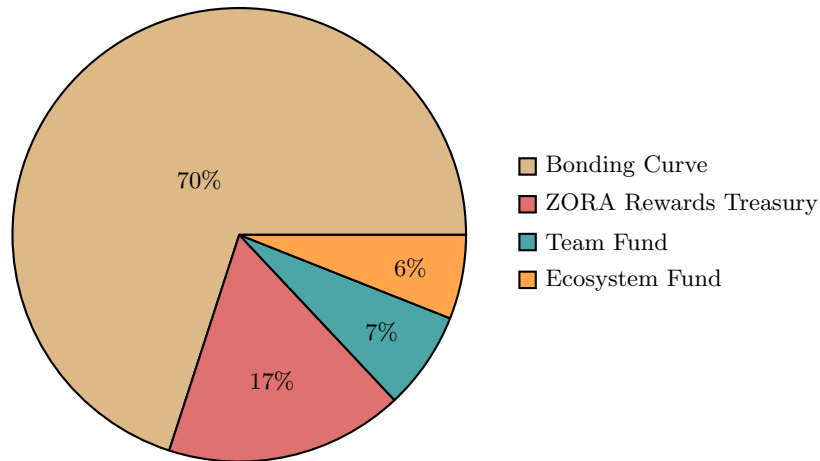

- **Bonding Curve Distribution (70%):** 700M \$REBL - Represents the tokens distributed to the public during the fair launch. These tokens were available for purchase by all participants at progressively increasing prices, ensuring equitable access without preferential treatment.
- **ZORA Rewards Treasury (17%):** 170M \$REBL - Dedicated to rewarding holders of the RebelInuX 2-asset baseline (Creator Coin + Rebel Key), with additional boosts for Rebel Journey Collectible holders. This treasury also funds community-governed initiatives. Tokens will be distributed according to the claim process outlined in Section 3 and are secured in a multi-sig wallet as detailed in Subsection 4.4.

For maximum security and transparency, the entire allocation is held in a dedicated multi-sig cold storage wallet: [ANjMEXSCm...AQ9Juo](#)

- **Team Fund (7%):** 70M \$REBL - Dedicated to compensating and retaining core contributors. The allocation has been finalized with a transparent vesting structure for optimal long-term alignment:
 - **Immediate Operations (40%):** 28M \$REBL available for strategic initiatives
 - **Long-Term Alignment (60%):** 42M \$REBL in 3-year linear vesting with 40% cliff

Verification: [Vesting Contract](#) • [Multi-Sig Wallet](#)

- **Ecosystem Fund (6%):** 60M \$REBL - Development, audits, marketing. On-chain vesting with a 6-month cliff. (See 4.3 for full schedule and contracts.)

Definitive Allocation of the 1B \$REBL Supply

4.3 Ecosystem Fund Allocation & Vesting

The Ecosystem Fund (60M REBL, 6% of total supply) is designated for development, audits, marketing, and operational costs. It is divided into two portions with tailored release schedules to ensure both immediate operational capability and long-term, aligned growth. All funds are custodied in the same secure multi-signature wallet.

- **Initial Operations (0.5%):** 5,000,000 \$REBL
 - **Purpose:** Essential marketing, development, and operational costs during the first 6 months post-TGE.
 - **Release:** Fully allocated to the ecosystem multi-signature wallet at TGE.
- **Sustained Growth (5.5%):** 55,000,000 \$REBL
 - **Purpose:** Ongoing development, partnerships, grants, and future operational expenses.
 - **Vesting Schedule:** Subject to a 6-month cliff. Thereafter, 20% is unlocked followed by linear vesting of the remainder over 18 months. This schedule is enforced on-chain via **StreamFlow** for transparency (Streamflow Docs, 2026). Unlocked tokens are streamed to the ecosystem multi-signature wallet. [View Vesting Contract on Solscan](#)

Governance & Custody:

- **Custody:** All tokens, both initially allocated and vested, are received by the same secure 2-of-3 multi-signature wallet (Solana Foundation, 2025).
- **Current Control:** The wallet is controlled by the founder.
- **Future Goal:** To decentralize control via a community proposal, transitioning to a 3-of-5 multi-signature wallet governed by core contributors and community members through the REBL Governance Hub.

On-Chain Verification:

- **Ecosystem Multi-Sig Wallet:** [DGRMGRm6f...1sa7R](#) (Holds the initial 5M REBL and receives vested tokens)
- **Vesting Contract:** [B477oon9L...C6sum7P1](#) (Holds and controls the release of the 55M REBL)

Note: The vesting contract holds the Sustained Growth allocation and controls its release schedule, streaming tokens to the ecosystem multi-sig wallet upon unlock.

4.4 SocialFi Holder Reward Mechanism

The primary method for community distribution leverages the **RebelInuX SocialFi ecosystem on ZORA**: the 2-asset baseline (Creator Coins + Rebel Key) for base eligibility, plus optional Rebel Journey Collectibles as yield boosters. The 170M \$REBL ZORA Rewards Treasury on Solana is a dedicated **fund** designed to directly reward asset holders and fund community-driven growth initiatives, operating in tandem with the project's main Ecosystem Fund.

Strategic Treasury Allocation & Vesting

The ZORA Rewards Treasury is strategically split into two powerful components:

- **Asset Holder Rewards (80% — 136M \$REBL)**: The core function. This majority is dedicated to rewarding loyal holders of the 2-asset baseline (\$rebelinuX + Rebel Key), with additional boosts for Journey Collectible holders, through structured, scheduled claim phases.
- **Community Incentives Pool (20% — 34M \$REBL)**: This portion is specifically earmarked for grassroots community initiatives. It fuels meme contests, shilling campaigns, and creator giveaways, working alongside the main Ecosystem Fund to directly reward engagement and attract new members.

To ensure both immediate utility and sustained long-term growth, the entire treasury is subject to a transparent vesting schedule:

- **40% (68M \$REBL) Cliff Release**: This portion is released immediately to fund initial claim phases and launch community initiatives.
- **60% (102M \$REBL) Linear Vesting**: The remaining tokens will be distributed linearly over a period of **2 years** (concluding on September 14, 2027), ensuring a continuous and predictable flow of rewards to holders and funding for community programs.

Smart Contract Verification: This vesting schedule is enforced by an immutable smart contract on the Solana blockchain. The community can verify the lock and schedule at any time:

`BAPQbfCF7EKUZJVURbXj4k3K4wJUz8UcechNDKKZd4U9`

Weekly Reward Pool: 1.28M - 3.2M \$REBL per week (40% minimum floor, 100% maximum), scaled by Gamma

Age Bonus: +7% per epoch, up to 20 epochs

Fixed Cross-Chain Value Peg

Each **Creator Coin** is intrinsically linked to a fixed, predetermined allocation of \$REBL tokens from this Solana-based treasury, establishing a powerful cross-chain utility and value anchor.

The total ZORA Rewards Treasury of 170 million \$REBL is secured in the multi-sig treasury wallet:

`8QnEtgHV7Kuoak2MdwifFP2iAQL6erUd7BdAyxg8YvNu`

The dedicated 136M \$REBL for Creator Coin claims will be distributed directly to holders from this address, meaning the long-term value of each Creator Coin is directly pegged to this substantial and securely held pool.

Each RebelInuX Creator Coin represents a foundational claim on future \$REBL tokens from the Solana blockchain, drawn directly from the ZORA Rewards Treasury. This value will be unlocked over specific, predefined claim periods.

Looking ahead, the utility of the Creator Coin is designed to evolve. The combined ZORA Rewards Treasury of 170M \$REBL already consolidates what was previously split between the rewards pool and the community reserve. A future proposition for the REBL Governance Hub could further expand the Creator Coin's claim mechanism to include additional ecosystem revenues or reserves, strengthening its role as the ecosystem's premier value-accruing asset.

Rationale & Strategic Advantage

This 80/20 model creates a powerful flywheel:

- It directly aligns token distribution with proven community engagement and asset ownership.
- It incentivizes long-term holding of the core 2-asset baseline (Creator Coin + Rebel Key) while rewarding collectors who add Journey Collectibles for bonus multipliers.
- It supports a healthy, stable market for \$REBL via a controlled, claim-based distribution process.
- The 20% Community Incentives Pool ensures continuous grassroots momentum and engagement, complementing the broader initiatives of the main Ecosystem Fund.
- The 40% immediate / 60% 2-year vesting schedule balances early participation rewards with a guaranteed, long-term runway for ecosystem growth.

4.5 Cross-Chain Value Acceleration

The RebelInuX ecosystem leverages a sophisticated multi-chain value acceleration mechanism to maximize value for \$REBL holders. Revenue generated from our ZORA assets is strategically used to benefit the Solana-based \$REBL token through a transparent fee distribution system.

ZORA Fee Structure

ZORA charges different trading fees depending on the asset type:

- **Creator Coin (\$rebelinux):** 3% total fee, of which 1% is the creator fee.
- **Content Coins (Rebel Key, Rebel Journey Collectibles):** 1% total fee, of which 0.5% is the creator fee.

All creator fees flow to the Value Acceleration mechanism.

Fee Distribution

Accumulated creator fee revenue is allocated across four governance-controlled pools. The REBL Governance Hub votes on when and how each pool is deployed:

- **Buy-Back & Burn Pool (50%):** Reserved for \$REBL buy-backs and burns on Solana. Deployments are triggered by Governance Hub vote, allowing the community to time buy-backs strategically.
- **AI Production Pool (20%):** Reserved for the creation of Rebel Journey Collectibles, including AI video generation tools, animation, voice, editing, and rendering infrastructure. Deployed at Governance Hub discretion.
- **Reserve Pool (15%):** A general-purpose reserve for future buy-backs and community initiatives. Provides supplementary funding for the ZORA Rewards Treasury's initial 170M allocation.
- **Operations Pool (15%):** Covers hosting, security, tooling, minting of Rebel Journey Collectibles, and day-to-day ecosystem support on ZORA.

Progressive Decentralization

The ecosystem is designed for gradual transition to community governance:

- The ZORA Rewards Treasury (170M \$REBL) is designed to sustain weekly rewards for over 2 years: 40% (68M) released immediately as a cliff, 60% (102M) vesting linearly over 2 years. Beyond this period, the 15% fee Reserve and other ecosystem revenue provide supplementary funding for rewards and community initiatives, deployed at REBL Governance Hub discretion.
- The REBL Governance Hub has the ability to propose and vote on adjusting the distribution parameters (50/20/15/15) and on triggering deployments from each pool, ensuring the model remains adaptive and community-directed.

Rationale: This creates a powerful cross-chain feedback loop. Trading activity on our ZORA assets accumulates revenue into governance-controlled pools, which the community can deploy strategically for buy-backs, AI production, and operations.

5 Evolving Tokenomics & Future Utility

The tokenomics outlined in this document represent the foundational layer of the RebelInuX SocialFi ecosystem. Our commitment is to evolve these mechanics transparently under community guidance, enhancing sustainability, utility, and value accrual for all holders.

5.1 Building on a Deflationary Base

The cross-chain buy-back and burn mechanism, funded by 50% of ZORA revenue, provides deflationary pressure on the \$REBL supply whenever the REBL Governance Hub triggers a buy-back. This is discretionary rather than automatic, allowing the community to time buy-backs strategically. Future governance may vote to augment this with additional burning mechanisms, further increasing token scarcity.

5.2 Expanding Token Utility

The primary utilities of \$REBL are governance (via the REBL Governance Hub with 500K threshold, 1 member = 1 vote) and value accrual via the 50% buy-back and burn pool, deployed at Governance Hub discretion. The community may propose and vote on additional utilities, such as:

- Staking rewards to incentivize long-term holding.
- Using \$REBL as a preferred currency for fees within ecosystem products.
- Granting bonus yields or exclusive access to holders of the core RebelInuX digital collectibles.
- Partnerships with other crypto projects, subject to Governance Hub approval.

All new utilities will be proposed, debated, and implemented through the decentralized governance process.

Partnerships. The REBL Governance Hub is the decision-making body for all external collaborations. Partnership proposals, whether cross-protocol integrations, joint drops, co-marketing campaigns, or token swaps, are submitted to the Hub for community debate and vote. This ensures every partnership aligns with the long-term interests of \$REBL holders rather than being decided unilaterally.

6 REBL Governance Hub & Journey Contest

RebelInuX prioritizes **effective, low-friction community governance over complex, low-participation DAO structures**. All key decisions, from Journey Contest winners to treasury allocations, are made through the **REBL Governance Hub**, a token-gated system integrated directly into our primary communication channel, Telegram.

6.1 How the Governance Hub Works

- **Access:** Any wallet holding **500,000 \$REBL** (as of May 26, 2026; threshold subject to community vote) can access the Hub.
- **Verification:** Access is granted via **Collab.land**, a secure, leading token-gating bot that verifies holdings (Collab.land, 2026).
- **Voting Power:** Each member has **1 equal vote** (not weighted by \$REBL balance).
- **Location:** The Hub operates as a dedicated, private Telegram group where verified members can participate in discussions and votes.
- **Link:** [Join the REBL Governance Hub](#)

6.2 Governance Powers

REBL holders who meet the threshold have the power to vote on:

1. **Journey Contest Winners:** Determine the next Journey theme (country + historical period).
2. **Treasury Proposals:** Propose and vote on initiatives funded by the ZORA Rewards Treasury, including triggering buy-backs from the Buy-Back & Burn Pool.
3. **Protocol Parameters:** Adjust key parameters (e.g., age multiplier k , max age $A_{\max}$, contest schedule, participation thresholds, bonus structure).
4. **Partnerships & Grants:** Approve major collaborations or community grant programs.

6.3 The Journey Contest

The Journey Contest is the flagship community engagement mechanism where REBL Governance Hub members decide the creative direction of the project's official Rebel Journey Collections.

What are Rebel Journey Collectibles?

Rebel Journey Collectibles are AI-generated videos created by the project, retracing important historical events of a country at a specific point in time. For example, the inaugural French Revolution Journey collection currently includes *REBL-J1A: "Twilight of the Ancien Régime"* (Versailles, 1779), *REBL-J1B: "Winter of Discontent"* (1780–1788), and *REBL-J1C: "The Oath"* (April–June 1789), with additional chapters to be released as the Journey unfolds. Each Journey is a **collection** containing multiple video digital collectibles. The Journey Contest determines which historical period and country will be the next Journey collection.

Contest Mechanics

1. **The Challenge:** Community members submit theme proposals by creating an original image featuring the RebelInuX mascot in a specific **country** and **historical period** (e.g., RebelInuX at the Fall of the Berlin Wall, 1989).

2. **Scoring & Winner Determination:** The winning theme is determined by a **hybrid scoring model** that balances community voting with social engagement.

$$\text{Final Score} = (\text{Vote Score} \times 0.6) + (\text{Engagement Score} \times 0.4) \quad (8)$$

where:

- **Vote Score (60% weight):** Each REBL Governance Hub member has 1 equal vote. $\text{Vote Score} = (\text{Votes received by entry} / \text{Total votes cast}) \times 100$. Voting period: 48 hours. Quorum requirement: At least 10 members must vote.
- **Engagement Score (40% weight):** Measured exclusively from official contest posts on X/Twitter. Metrics include Likes, Reposts, and Replies. $\text{Engagement Score} = (\text{Entry's engagement} / \text{Total engagement across all entries}) \times 100$. Bot-driven or inauthentic engagement may be filtered.

3. Example Calculation:

Entry	Vote Score (60%)	Engagement Score (40%)	Final Score
Entry A	80	70	$(80 \times 0.6) + (70 \times 0.4) = 76$
Entry B	70	90	$(70 \times 0.6) + (90 \times 0.4) = 78$

Entry B wins despite fewer votes, due to higher community engagement.

4. **Runoff:** If no entry achieves a clear lead (top two within 5 points), a 24-hour runoff vote is held with reset engagement scores.
5. **Veto:** In extreme cases (offensive or illegal content), the Governance Hub may veto a winner by 75% super-majority vote.
6. **The Prize:** The winning theme becomes the project's next official **Journey**. The winner receives public credit, crypto rewards, \$rebelinux Creator Coins, and a free mint of the first video digital collectible from the collection. All reward amounts are announced per contest.
7. **Production:** The project produces multiple AI-generated Journey video digital collectibles based on the winning theme, retracing key historical events of that country/period.
8. **Reward Boost:** The newly minted Rebel Journey Collection becomes available as a yield booster for the following epoch. Holders who collect the most recent Rebel Journey Collectible boost their \$REBL rewards multiplier. Base eligibility remains the 2-asset baseline.
9. **Repeat:** A new contest begins once the current Journey is completed. The duration of each Journey varies based on the historical theme and the number of videos produced in the collection.

Example Journey Flow

Current Journey

As of this whitepaper version, the current Journey is the **French Revolution Journey**, with collectibles including REBL-J1A, REBL-J1B, and REBL-J1C. Additional chapters will be released as the Journey unfolds.

Contest Schedule

- **Submission Period:** Days 1-4 of each epoch
- **Voting Period:** Days 5-6 of each epoch
- **Winner Announcement:** Day 7 of each epoch
- **Production Timeline (post-contest):** The winning Journey collection is produced and minted. Duration varies by historical theme.

6.4 Why a Governance Hub, Not a DAO?

- **Simplicity:** Participating is as easy as joining a Telegram group.
- **Engagement:** Governance happens where the community already lives.
- **Security:** Collab.land provides enterprise-grade token gating (Collab.land, 2026).
- **Equal Voting:** 1 member = 1 vote prevents whale dominance.
- **Cost:** No gas fees for voting or proposals.

6.5 Future Evolution

If the community grows to demand a full on-chain DAO, a vote within the Governance Hub will initiate that transition. Until then, the **REBL Governance Hub remains the definitive decision-making body.**

6.6 Implementation Status

RebelInuX is progressively rolling out its SocialFi ecosystem. The following components are currently live, with additional features under development:

Live Features

- **REBL Governance Hub:** Token-gated Telegram via Collab.land (500K \$REBL threshold, 1 member = 1 vote)
- **Journey Contest:** Community voting system with 60/40 hybrid scoring (vote + social engagement)
- **Rebel Key:** One-time Solana address registration for all future epoch rewards
- **Rebel Journey Collectibles:** Optional yield boosters on ZORA (+0.05x per collectible held; +0.10x additional for the largest holder of any single collectible)

Upcoming Features

- **Treasury Proposal Framework:** Community-driven funding for ecosystem initiatives
- **Parameter Adjustment Voting:** Community governance over protocol parameters

7 Decentralization & Security

7.1 Ecosystem Security & Infrastructure

Our commitment to security extends beyond our own contracts to the foundational layers we build upon. We have chosen industry-leading platforms for their proven security, decentralization, and reliability.

- **ZORA Network Security:** Our Creator Coins, Rebel Key, and Rebel Journey Collectibles are deployed on the ZORA network, an Ethereum Layer-2 built on the **Base** blockchain. ZORA inherits the robust security of the Ethereum ecosystem while offering low-cost and efficient transactions (ZORA Docs, 2026c).
- **Base Blockchain Security:** Base is a **secured, Ethereum Layer-2** chain incubated by Coinbase. It is built on the MIT-licensed OP Stack, the same technology powering Optimism (Base Docs, 2026).
- **Solana Blockchain Performance:** The \$REBL token resides on the Solana blockchain, chosen for its **high throughput, low transaction costs, and speed**. Solana’s unique Proof-of-History (PoH) consensus provides deterministic leadership scheduling (Solana Docs, 2026).

This multi-chain architecture strategically leverages the core strength of each platform: ZORA/Base for secure digital ownership and SocialFi, and Solana for high-performance tokenomics.

7.2 Current State of Decentralization

At RebelInuX, our foundational principles are transparency, decentralization, and security. We believe that true empowerment arises when control is distributed across the community, while maintaining the legal and operational compliance required for long-term sustainability.

\$REBL Token on Solana:

- **Contract Renouncement:** The **Freeze Authority, Mint Authority, and Update Authority** for the \$REBL token smart contract have been permanently renounced.
- **Implications:** No single entity can freeze token transfers or mint new \$REBL tokens. The smart contract code is immutable.
- **Liquidity Protection:** The initial REBL/SOL pool on PumpSwap has **90% of its LP tokens locked for 1 year**.
- **Team Alignment:** Tokens allocated to the ecosystem fund are subject to transparent, linear vesting.

Creator Coins & Content Coins on ZORA:

- **Founder Commitment:** 50% of the Creator Coins supply is allocated to the founder and subject to a 5-year linear vesting schedule.
- **Decentralized Ownership:** Each asset is owned directly by the holder, secured by the ZORA protocol on Base.
- **Immutable Contracts:** Smart contracts are non-upgradeable; behavior and metadata cannot be changed after deployment.
- **Censorship-Resistant:** Assets cannot be altered, frozen, or seized by any central party.

Rebel Journey Collectibles:

- Each Rebel Journey Collectible is a fully on-chain asset on ZORA (Base).
- The subject matter is determined by community vote via the REBL Governance Hub.
- Rebel Journey Collectibles are optional yield boosters that multiply an eligible holder’s \$rebelinux age-weighted share.

Our vision is to cultivate an unstoppable rebellion, resistant to censorship and manipulation, while operating with the legal compliance required for long-term sustainability.

8 Our Rebellion Roadmap

Q2 2025 — Foundation & Launch

Completed

- \$REBL token creation on pump.fun
- Community building on X, Telegram, Discord
- Renouncement of mint, freeze, and update authority

Q3-Q4 2025 — SocialFi Launch & Journey Begins

Completed

- Creator Coins & Content Coins on ZORA
- First Rebel Journey minted (French Revolution)
- \$REBL listing on PumpSwap

May 3, 2026 — Epoch A1: New Era Begins

Completed

- Unified epoch system launched (A1, A2, A3...)
- Permanent Rebel Key and one-time Solana registration
- REBL Governance Hub + Journey Contest activated

May-Sep 2026 — Governance & Treasury Evolution

Completed

- Rebel Journey Collectibles become optional boosters
- Collector Bonus system live (+0.05x / +0.10x)
- Community Reserve merged into 170M ZORA Rewards Treasury
- Governance-controlled Value Acceleration model (50/20/15/15)

Q4 2026 — Expansion & Second Journey

In Progress

- Second Rebel Journey launched (community-voted theme)
- Expanded ZORA collection and new Journey Collectibles
- Continued treasury scaling via governance-triggered buy-backs
- Mascot origin story (illustrated narrative of Idilys's journey through history)
- Museum & cultural-site collaborations (research, licensing, partnerships)
- Formal entity registration process initiated

2027 — Governance Transfer & Growth

Planned

- Progressive transfer of protocol parameters to Governance Hub
- Multi-region historical arcs (Asia, Americas, Africa)
- Community Reserve fully under community governance
- Self-sustaining deflationary flywheel

Note on Timelines: This roadmap outlines our strategic goals and estimated timeframes. Development is complex and unpredictable. These dates are forecasts, not promises, and may shift based on technical challenges, community feedback, and market conditions.

The Evolving Path of the Rebellion

9 About the Founder

Clément Landormy: A dedicated expert in cryptoassets and blockchain technology with over three years of specialized experience gained through his PhD in economics. His expertise encompasses cryptoasset valuation, econometrics, and market analysis.

Clément has conducted extensive empirical research using on-chain data from Binance, Coinbase, and CoinMetrics, focusing on market risks, asset pricing, and financial forecasting. He is proficient in quantitative analysis, financial modeling, programming, and data visualization.

His mission is to develop transparent, innovative, and community-driven blockchain projects that advance the industry and foster trust within the ecosystem.

10 Meet Our Inspiration: RebelInuX's Model

RebelInuX is more than just a meme coin, it's a reflection of the loyalty, playfulness, resilience, and strong character embodied by our beloved dog, Idilys.

About Idilys

Idilys is a Shiba Inu known for her unwavering loyalty, sharp intelligence, courage, and strong personality. She's a true rebel at heart. She doesn't listen much to orders and hates being on a leash. Despite her independence, she's loving and fiercely loyal. She embodies the spirit of rebellion, community, and perseverance, serving as the perfect symbol of strength and freedom.

Why Idilys?

Our dog serves as the mascot and inspiration for RebelInuX because:

- **Loyalty:** Like our community, Idilys is fiercely loyal and dedicated.
- **Resilience:** Always bouncing back, just like our token aims to grow and adapt.
- **Independence:** She's strong-willed and refuses to be controlled, a true reflection of rebellion.
- **Playfulness:** Bringing joy and fun, which is at the heart of our meme culture.

11 Join the Rebel Pack and Unleash the Rebellion

We believe in challenging the status quo, fighting injustices in the crypto sphere and beyond. As a community, we stand united in pushing boundaries, standing up for what's right, and making a difference. We are building more than just a token; we are building a movement powered by **AI-animated historical Rebel Journey Collectibles** and a sustainable **2-asset SocialFi ecosystem with optional yield boosters**.

Together, we are more than just a meme, we are a rebellion that fights for change.

Become part of the wildest crypto movement. Connect with the community, explore our digital assets, and join the conversation on our official channels:

- **Explore the Core Assets:** [ZORA Collection](#) (Creator Coins + Rebel Key + Rebel Journey Collectibles)
- **Follow the News:** [Twitter](#)
- **Join the Chat:** [Telegram](#)
- **Join the REBL Governance Hub:** [Telegram](#) (500K \$REBL required)

- **Connect with the Community:** [Discord](#)
- **Follow the Journey:** [Instagram](#) — [TikTok](#) — [YouTube](#) — [Facebook](#)

Revenue generated through our social channels, once established, will be shared between founder compensation and RebelInuX cultural preservation and community initiatives. The specific split is at the founder's discretion and may be revisited under future governance.

Join us and help build a vibrant, rebellious SocialFi ecosystem that stands strong together!

12 How to Acquire \$REBL Tokens

There are two primary methods to acquire \$REBL tokens and join the ecosystem:

1. Claim by Holding the 2-Asset Baseline

Holders of a **Creator Coin (\$rebelinux)** and the **Rebel Key** can claim \$REBL tokens automatically each epoch after one-time address registration. Rebel Journey Collectibles provide optional boost multipliers on top of the baseline.

2. Purchase on the Open Market

The \$REBL token is publicly traded on Solana decentralized exchanges. The primary market for initial liquidity is:

Trade on [pump.fun](#)

[Click to open](#)

We are actively pursuing listings on additional DEXs and CEXs to improve accessibility and liquidity for all users.

13 Token Creation and Verification

The RebelInuX (\$REBL) token was officially created on **18 June 2025** at **20:38 UTC** using the [pump.fun](#) platform, which handles the initial token deployment and bonding curve mechanism (Pump.fun Docs, 2025).

Solana Token Address:

[F4gh7VNjtp69gKv3JVhFFtXTD4NBbHfbEq5zdiBJpump](#)

\$rebelinux Creator Coin (Base)

The \$rebelinux token serves as the Creator Coin for the RebelInuX ecosystem.

ZORA: [View Creator Coin](#)

BaseScan: [0xf95BEeF6439ec38fA757238Cdec8417ABDA536bd](#)

Supply Distribution Analysis (as of October 2, 2025):

- **Total Supply:** 1,000,000,000 \$rebelinux
- **Protocol Reserves:** 489,448,313 (48.94%) – 5-year linear vesting
- **Founder Allocation:** 11,309,640 (1.13%) – including 757,953 secondary market acquisitions
- **Liquid Supply:** 499,242,047 (49.92%) – available for trading

Rebel Key (Base)

The Rebel Key is the claiming interface for all epoch rewards.

On-Chain Verification

- **\$REBL Token Contract:** Verify on [Solscan](#)
- **\$rebelinux Creator Coin:** Verify supply distribution on [BaseScan](#)
- **Rebel Key:** [View on ZORA](#) and register your Solana address
- **Rebel Journey Collectibles:** [View Collection on ZORA](#)
- **ZORA Digital Collectible Collections:** View the complete collection at <https://zora.co/@rebelinux>

Note: Supply metrics undergo periodic revision to reflect vesting progression and market activity.

This documentation ensures that the creation process and security claims are transparent and verifiable by all community members and stakeholders.

Important Market Considerations & Risks

Volatility & Market Manipulation

Participants in the RebelInuX ecosystem should be aware of the highly volatile and speculative nature of cryptoasset markets. Upon the launch of our initial liquidity pool, it is common for automated bots and large-scale traders ("whales") to engage in market manipulation strategies. This can include:

- **Extreme Price Volatility:** Rapid and significant price increases ("pumps") and decreases ("dumps").
- **"Sniping" and Front-running:** Bots may execute transactions before others, gaining an unfair advantage.

This activity is an external feature of the trading environment and is not initiated by, nor within the control of, the RebelInuX team.

Our foundational mitigations against malicious activity are:

- The permanent renouncement of mint, freeze, and update authorities upon graduation to DEX listing.
- The locking of **90% of the initial liquidity pool (LP) tokens**. The remaining portion is held in a secure multisig wallet for future community-approved initiatives.

Investors should exercise extreme caution, conduct their own research (DYOR), and never invest more than they are willing to lose. The RebelInuX project is focused on long-term utility and growth, not short-term price action.

Jurisdictional Restrictions

AVERTISSEMENT POUR LES RÉSIDENTS FRANÇAIS

Interdit aux résidents français.

En raison des restrictions réglementaires de l'AMF (Autorité des Marchés Financiers), les résidents et citoyens français sont expressément interdits d'acheter, de détenir ou d'échanger le jeton RebelInuX.

ATTENTION: RESTRICTIONS FOR THE EEA & SWITZERLAND

Due to regulatory restrictions, including those under the EU's Markets in Crypto-Assets (MiCA) regulation, this offering is **not intended for residents** of the European Economic Area (EEA) or Switzerland. Citizens and residents of these jurisdictions are expressly prohibited from participating.

Legal Disclaimer

RebelInuX is a community-driven project designed for entertainment and community engagement centered around AI-animated historical art. This token is **not a security, investment, or financial product** and should not be viewed as such. It confers no ownership, equity, or financial rights. Its value is derived solely from community participation and speculative demand.

Risk Warning: Cryptocurrency investments carry significant risks, including the potential loss of the entire principal amount invested. The regulatory landscape for digital assets is evolving. Please conduct your own extensive research (DYOR) and consult with a qualified financial and legal professional before participating. RebelInuX does not guarantee any financial returns and is not responsible for any financial damages or losses incurred.

14 Conclusion

RebelInuX turns history into living art. Through AI-animated collectibles, sustainable token economics, and community governance, we are building not just a project, but a movement. Join us in preserving history, one Journey at a time.

Hold the assets. Preserve history. Earn \$REBL.
